

Black Hole Tank instructions

step 4

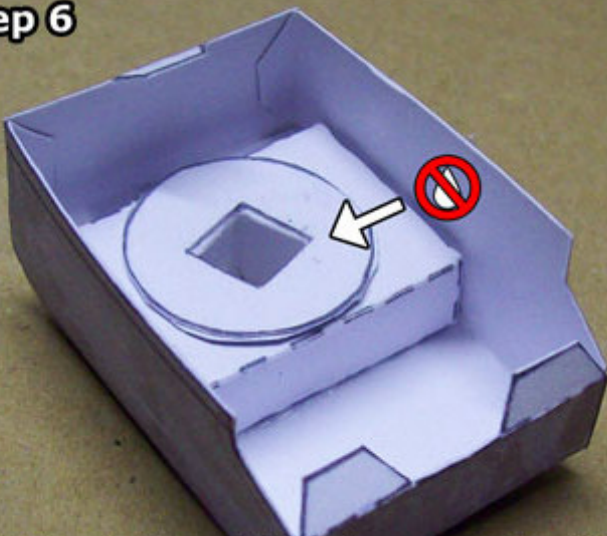

Now glue part 6 underneath part 1; make sure to align the holes.

step 5

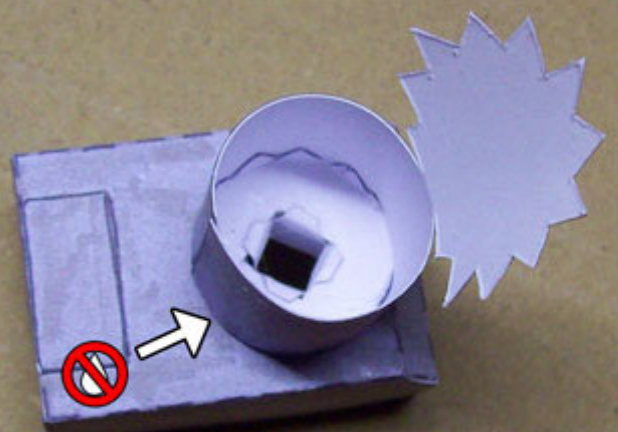

Glue part 7 into a square axle. Then cut out the square holes on parts 8, and slide one of the rings over part 7. Apply some glue and fold back the glueing tabs, and sandwich them with the other ring.

step 6

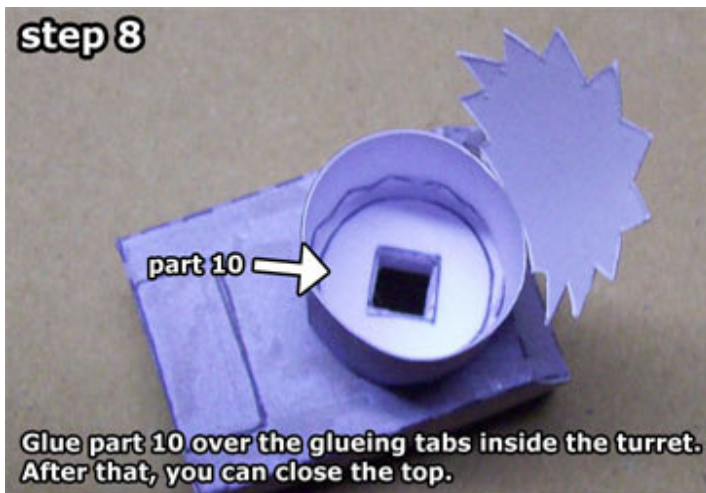

Push the axle through the holes on parts 1 and 6; DON'T USE ANY GLUE FOR THIS STEP!!

step 7

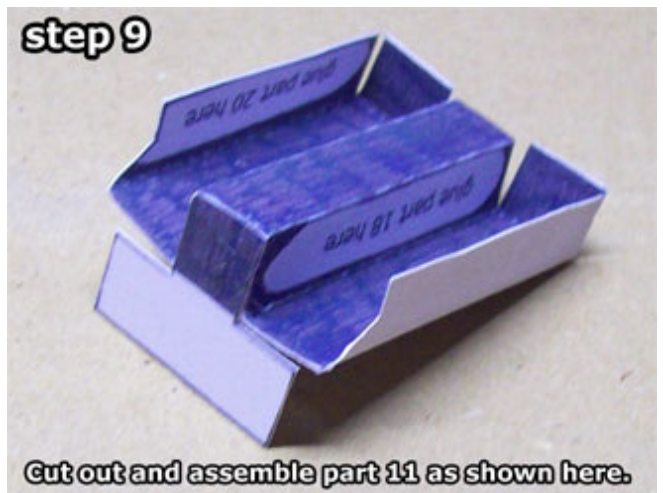

Cut out the hole on the bottom of part 9 and assemble it like a drum, but DON'T close the top yet! Put the hole in the bottom over the glueing tabs of the axle you made earlier, and fold them back and glue them down. DON'T glue the turret to the hull of the tank!

step 8

Glue part 10 over the glueing tabs inside the turret. After that, you can close the top.

step 9

Cut out and assemble part 11 as shown here.

step 10

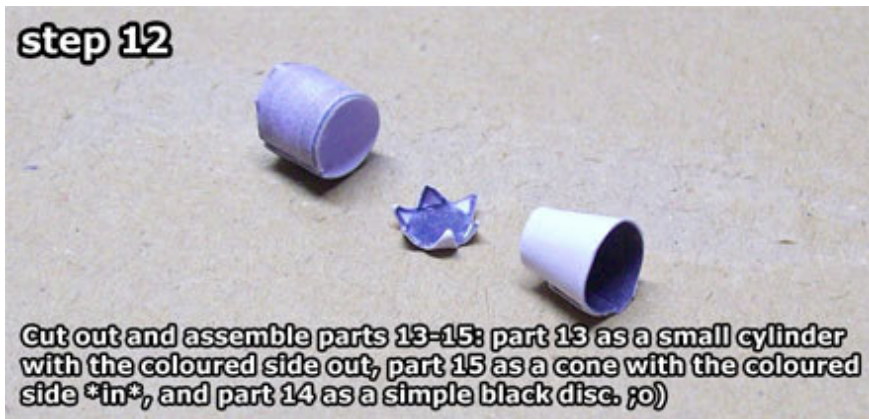

Then glue it to the bottom of the hull like so.

step 11

Now return to the turret and glue on part 12 as shown here.

step 12

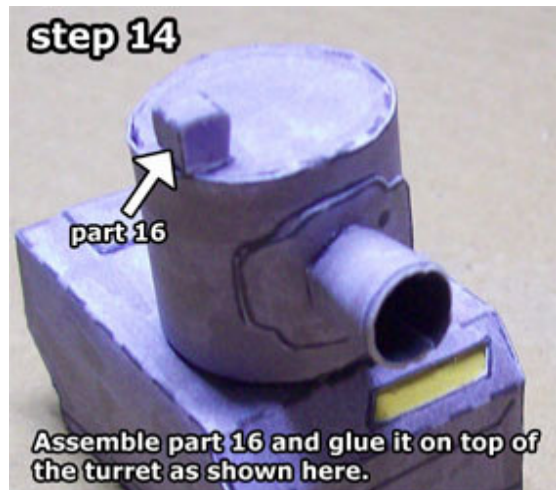

Cut out and assemble parts 13-15: part 13 as a small cylinder with the coloured side out, part 15 as a cone with the coloured side *in*, and part 14 as a simple black disc. ;o)

step 13

Glue the black disc to the back of the black cone, then slide them inside of the grey cylinder and then glue these parts to the front of the turret.

step 14

Assemble part 16 and glue it on top of the turret as shown here.

step 15

Roll up part 17 as tight as you can.

step 16

step 17

step 18
